The International Classification of Orofacial Pain (ICOP), published by the International Headache Society, specifically expands on dentoalveolar, oral, and facial pains and proposes some novel regional pains that may or may not be related to headache. ICOP is freely downloadable (https://doi.org/10.1177/0333102419893823). ICOP is aligned with the ICHD, ICD, and Diagnostic Criteria for Temporomandibular Disorders (DCTMD).

B. DCTMD. Studies on TMD are required to adhere to the methodology, terminology, and diagnostic criteria within the publications by Schiffman et al (2014) and Peck et al (2014), which describe the DCTMD. The journal discourages the use of painful TMD as a diagnostic entity. Please visit the INFORM website (view international) for patient examination guidelines, forms to use, and a number of invaluable resources needed to plan and perform research on TMD. All are freely downloadable.

C. The International Classification of Headache Disorders (ICHD, version 3, 2018), published by the International Headache Society, covers dentoalveolar, oro-facial pain, and related conditions. The classification is freely downloadable (www.ichd-3.org/).

Review/editing of manuscripts. Manuscripts will normally be reviewed by the editor-in-chief, one associate editor, and at least two reviewers with expertise in the article's subject matter. The journal operates a conventional single-blind reviewing policy in which the reviewer's name is always concealed from the submitting author. External peer review is not mandatory in the journal. After review by the editor-in-chief and/or an associate editor, a decision to either reject the work or to continue the review process is made. Any works where the editor-in-chief is a contributor will be handled and decided upon by an associate editor. We attempt to begin the review process as rapidly as possible, and a decision is reached as soon as the reviewer's comments are received, typically within 8 to 10 weeks.

Publication Every effort is made to publish accepted articles expediently. Authors should address all inquiries regarding this process to the Managing Editor, Ms Hallie Koontz (hkkoontz@quinnbook.com). The publisher reserves the right to edit accepted manuscripts to ensure conciseness, clarity, and stylistic consistency, subject to the author's final approval.

Online only. The journal reserves the right to publish any accepted article in the online version only as determined by the journal's editorial board or staff.

Adherence to guidelines. Manuscripts not prepared in accordance with these guidelines or written in improper English will be returned with instructions to correct these problems prior to resubmission and review.
• Results. Present results in a logical sequence in the text, tables, and illustrations. The primary outcome should be presented first, followed by secondary outcomes and subgroup analyses. Do not repeat the data in the text as data in the tables or illustrations; emphasize only important observations. If relevant, describe the sample and provide necessary characteristics. Consider the judicious use of tables and/or figures to avoid repeating the same numbers in the text, tables, and figures.

• Discussion. Structured discussions are easier to read. Begin with a summary of the findings in order of importance and how these findings compare with previously published studies. Emphasize new and important aspects of the study and the conclusions that follow from them. Do not repeat in detail data or other material given in the Introduction or Results section. Relate observations to other relevant studies; point out the implications of the findings and their limitations. Importantly, authors should discuss statistically significant results in view of their clinical importance. Does the result obtained translate into a meaningful clinical effect? Often results may be of statistical significance, but on further examination, may reflect a negligible clinical result.

• Conclusions. A succinct summary of major findings that includes bullet points, as below.

• Highlights. Authors are requested to include two to five bullet points clearly emphasizing the work’s highlights. Insert these after the Conclusions section, above the reference list. Select a heading based on the research area:
  • Clinical research
  • Clinical implications
  • Public health relevance
  • Basic science research
  • Key findings
  • Possible translational implications

• Acknowledgments. Please describe the contribution(s) made by each author included in the work. Acknowledge persons who have made substantive contributions to the study but are not in the author list. Specify grant or other financial support, citing the names of all supporting organizations and grant numbers. Note whether authors do or do not have conflicts of interest. If the study had no external funding source or if the funding source had no role in the study, state so explicitly.

• Figure legends. Figure legends should be grouped at the end of the text.

• Abbreviations. The full term for which an abbreviation stands should precede its first use in the text unless it is a standard unit of measurement.

• Trade names. Generic terms are to be used whenever possible, but trade names and manufacturer should be included parenthetically at first mention.

• Tooth numbering. Please use the international (FDI) system. Citing tooth by name is generally preferred.

References
  • All references must be cited in the text, numbered in order of appearance.
  • The reference list should appear at the end of the article in numeric sequence.
  • Do not include unpublished data or personal communications in the reference list. Cite such references parenthetically in the text and include a date.
  • Avoid using abstracts as references.
  • Provide complete information for each reference, including names of all authors (up to 6). If the reference is part of a book, also include the title of the chapter with page numbers and the name(s) of the book’s editor(s).

Journal reference style:

Book reference style:

Figures and Tables
  • All figures and tables should be numbered and cited in the text.
  • Figures and tables can be grouped at the end of the manuscript or uploaded individually.
  • Clinical images should be at least 300 dpi at 3.5 in wide.
  • Images grouped together (eg, 1a–1c) must be saved as individual files (eg, 1a, 1b, 1c).
  • Line art (eg, graphs, charts, line drawings) should be provided as editable vector art (eg, Illustrator or EPS files).
  • Images containing type should either be saved as a layered file or provided along with a second file with type removed.

Note that article acceptance is pending receipt of acceptable original art.

Supplemental Materials
  • The same quality specifications and submission rules as for figures and tables apply to supplemental materials.
  • Supplemental materials will be published online only.
  • Supplemental materials should be labeled as Fig S1, Table S1, or—in the case of example questionnaires, forms, surveys, etc—Appendix 1.
  • If a figure or table is of such a length that online only publication is more feasible, or if the information presented is more beneficial of a supplemental material, the Publisher retains the right to make existing figures or tables supplemental materials.

Expanded Methodological and Reporting Requirements: Ethical or Institutional Review Board Approval: Clearly indicate that the study obtained appropriate approval (or a statement and explanation of why it was not required), including the name of the ethics committee(s) or institutional review board(s) and the number/ID of the approval(s). For human studies, please also add a statement that participants gave informed consent before taking part.

Study Protocol: Clinical trials must be registered in an acceptable clinical trials registry (clinicaltrials.gov, etc). Please provide the registration number (required for interventional studies). The study’s registration number should appear in the manuscript following the abstract. We encourage the registration of observational study protocols.

Reporting guidelines and checklists: These are listed below and can all be readily found at the Equator Network (www.equator-network.org/). Please note that completed applicable checklists and appropriate documentation (flow diagram, etc) should be uploaded with your submission. Alternatively, the forms may be sent to the editorial office by post, or scanned copies of the handwritten forms can be emailed.

MANUSCRIPT SUBMISSION
All manuscripts must be submitted via the journal’s online submission service (www.manuscriptmanager.net/joph). All items indicated (including permissions and waivers, described below, and signed mandatory submission form) must be uploaded to complete the submission process. Detailed instructions are provided.

Permissions and Waivers
  • Permission must be obtained for the use of material (eg, text, photos, drawings) under copyright that does not belong to the author.
  • Waivers must be obtained for photographs showing faces.
